

Skylands Ice Arena, Stockholm, New Jersey

Our office designed a major upgrade to the 10 lockers rooms and two public toilet areas which make up the core of this facility. Skylands has two full size ice rinks which are used for children and adult hockey leagues as well as for figure skating and parties. The finish materials needed to stand up to an intense use. The locker rooms were completely rehabilitated with new plumbing, finishes, benches and lighting. We prepared detailed construction documents that were bid by a number of experienced contractors and the construction was achieved with the best price and quality.
